

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- ❑ Find the best tech solution to solve existing business problems.
- ❑ Describe the structure, characteristics, behaviour, and other aspects of the software to project stakeholders.
- ❑ Define features, development phases, and solution requirements.
- ❑ Provide specifications according to which the solution is defined, managed, and delivered.
